

VELOX LOGISTICS

TRACKING OPERATIONS MANUAL

Document KB-005 | Version 4.2
Status: ACTIVE | Classification: INTERNAL
Effective: 2026-03-15

CURRENT ACTIVE MANUAL

Operational standard for tracking, tracing, and event handling.

Synthetic enterprise document created exclusively for NexusDocs AI development and RAG evaluation.

Status	ACTIVE	Classification	INTERNAL
Owner	Operations Department	Effective Date	2026-03-15
Related	Shipping Policy v3.0	Related	Claims & Refund Policy v2.1

1. Purpose

This manual defines the operational rules for shipment tracking events, event validation, delivery evidence, exception handling, tracing, and escalation across Velox Logistics.

2. Scope

The manual applies to domestic shipments processed by Velox Logistics distribution centers, transportation operations, and last-mile delivery teams.

3. Tracking Event Model

PICKED_UP: accepted into network.

IN_TRANSIT: moving between operational nodes.

AT_DISTRIBUTION_CENTER: scanned at a Velox facility.

OUT_FOR_DELIVERY: assigned to last-mile route.

DELIVERED: delivery completion recorded.

DELIVERY_EXCEPTION: event prevented normal delivery progression.

RETURN_TO_SENDER: entered an authorized return flow.

4. Event Ordering

Tracking systems should preserve chronological event history. Corrective events must not silently erase prior evidence. Corrections should retain the original event, corrected event, reason, timestamp, and responsible process or operator.

5. PICKED_UP

PICKED_UP confirms physical custody of the shipment. A label creation event alone does not establish physical custody.

6. IN_TRANSIT

Repeated IN_TRANSIT events are valid when they represent distinct scans, transfers, or route progression. Absence of tracking progression must be evaluated against the loss threshold established by the ACTIVE Shipping Policy.

7. AT_DISTRIBUTION_CENTER

Confirms receipt at a Velox facility. Unexpected dwell time may trigger internal exception monitoring before the shipment qualifies for formal loss investigation.

8. OUT_FOR_DELIVERY

Indicates assignment to a last-mile route. Failure to complete delivery does not automatically indicate loss; the shipment may receive a DELIVERY_EXCEPTION, return to a facility, or be rescheduled.

9. DELIVERED

Proof may include timestamp, location or route evidence, recipient confirmation, delivery scan, authorized photograph, courier record, or other permitted evidence. A DELIVERED event may be corrected when evidence

establishes an erroneous completion scan.

10. Delivered but Not Received Procedure

When a customer reports non-receipt while tracking shows **DELIVERED**, Customer Experience must advise the customer to allow **24 hours from the recorded delivery timestamp** before a formal non-delivery investigation is opened.

During this period, the customer may verify the address, check with household members or reception, inspect safe delivery locations, and review delivery notifications.

If the shipment remains unlocated after 24 hours, Customer Experience may open a non-delivery case under the Claims & Refund Policy. Operations must then review proof-of-delivery evidence and operational records.

The 24-hour waiting rule does not extend the claim filing deadline established by the ACTIVE Shipping Policy.

11. DELIVERY_EXCEPTION

Examples include recipient unavailable, inaccessible destination, incorrect address, weather disruption, damaged shipment requiring review, route disruption, or security restriction.

12. RETURN_TO_SENDER

Typical causes include repeated failed attempts, invalid address, recipient refusal, prohibited delivery condition, or an authorized operational decision. Return status does not itself determine refund or compensation eligibility.

13. Missing Tracking Progression

Operations should investigate unusual gaps using facility scans, route records, transfer evidence, and other data. Potential loss classification is available only after the threshold defined by the ACTIVE Shipping Policy.

14. Operational Trace

A trace may include validation of the latest reliable scan, facility records, transfer and route data, responsible-team confirmation, proof-of-delivery review, and documentation of the result. Operations owns the trace result; Customer Experience owns claimant communication.

15. Event Correction

Corrections should record shipment identifier, original event, corrected event, reason, timestamp, and responsible system, process, or operator. Event correction must preserve auditability.

16. Escalation

Escalate materially inconsistent evidence, theft or security concerns, correlated anomalies across multiple shipments, or cases exceeding standard authority. Potential claim fraud follows the Claims & Refund Policy.

17. Relationship with Claims

This manual determines tracking interpretation and operational investigation procedures. The Claims & Refund Policy determines claim administration, evidence requirements, eligibility review, and resolution workflow. The ACTIVE Shipping Policy determines service windows, claim filing deadlines, operational loss thresholds, and standard compensation ceilings.

18. Auditability

Tracking and tracing records must preserve sufficient evidence to reconstruct the shipment's operational history and material decisions.

19. Revision History

Version	Effective date	Status	Summary
4.2	2026-03-15	ACTIVE	Standardized tracking states, 24-hour delivered-but-not-received procedure, trace workflow, event correction, and cross-policy responsibilities.
